The DNA sequence was isolated from a peripheral nerve from a rat dorsal ganglia. The PN4 sodium channel sequences are tetrodotoxin-sensitive sodium channels. The protein is used in assays for detecting inhibitors of tetrodotoxin-sensitive sodium channels, which alleviate pain. The probes can be used to detect and isolate the DNA or protein in tissues. The antibodies can also be used to isolate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein in tissues. The antibodies can also be used to isolate the protein. The protein is used as a therapeutic target for compounds to treat disorders of the nervous system, such as epilepsy, stroke and br injury, diabetic neuropathy, and AIDS-associated neuropathy, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27 QFDGWEISGFEGKKDAGYVINLSKDTFIKPVFKKIEEKKEEENKPTFDVSKKKDNPQVNH

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 548 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a binds to biological sample. (I) is are used to determine whether a compound binds to biological sample. (I) is used to determine whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                         Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        37 EGKKDAGYVINLSKDTFIKPVFKKIEEKKEEENKPTFDVSKKKDNPQVNHSQLNESHRKE 96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12.1%; Score 84.5; DB 23; Length 157; 26.2%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is encoded by the rat PN4 sodium channel cDNA clone of the invention. The DNA sequence was isolated from a peripheral nerve from a rat dorsal ganglia. The PN4 sodium channel sequences are tetrodoctoxin-sensitive sodium channels. The protein is used in assays for detecting inhibitors of tetrodoctoxin-sensitive sodium channels, which alleviate pain. The probes can be used to detect and isolate the DNA or protein in tissues. The antibodies can also be used to isolate the protein. The protein is used as a therapeutic target for compounds to treat disorders of the nervous system, such as epilepsy, stroke and brain injury, diabetic neuropathy, and AIDS-associated neuropathy, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         86

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .6-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .8-JUN-1999
AAG35428;
streptococcus/GBS (Streptococcus agalactise) or group A streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus)). Given in the proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactise and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a compound binds to (1). A composition composition. The disease caused by cused as avaccine or diagnostic composition. The disease caused by C. Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity contractory immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2;

```
CC AAB35806 which are involved in regulating the cell cycle. The protein and AAB35806 which are involved in regulating the cell cycle. The protein and CC also includes oligomorlectides AAC83114 - AAC83139 which are related to DNA sequences have been isolated from Zea mays (corn), and the invention of the cell cycle polymuclectides. The cell cycle polymuclectide sequences are useful for producing transgenic plants such as maize, soybean, corner, sorghum, canola, wheat, alfalfa, cotton, rice, barley and millet with increased levels of cell cycle gene activity, such as curivity of cyclin and cyclin-dependent kinases. The DNA sequences are also useful as probes for detecting deficiencies in the level of mRNA in correening for desired transgenic plants, for detecting mutations in the compounds for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detecting mutations in the correction of the encoded polypeptides and site-directed contagenesis in eukaryotic cells. The DNA sequences are also useful for recombinant expression of the encoded polypeptides and as immunogens for crecombinant expression of the encoded polypeptides and as immunogens of expression cassette including a cell cycle regulatory gene is useful for expression cassette including a cell cycle regulatory gene is useful for corptain antibodies. The antibodies are useful in assaying expression clevels of contagenesis, for identifying homologues of nucleic acids from other species, and for identifying homologues of collypeptides from other species, and for purification of the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              248 IPVYK----DNDSFTVKRISDLQASKESPARAVASDKGTPVPSSSSQEKDPVAKTILNKV 303

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The gene encoding topoisomerase II from Plasmodium falciparum.";

Nucleic Acids Res. 22:2547-2551(1994).

I The gene encoding to FOPOLOGICAL STATES OF DNA BY TRANSIENT

PERAKAGE AND SUBSEQUENT REJOINING OF DNA STRANDS. TOPOISOMERASE II

MAKES DOUBLE-STRAND BREAKS.

C -1 CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining

C f double-stranded DNA.

C -1 SUBCELLULAR LOCATION: Nuclear.

C -1 SUBCELLULAR LOCATION: Nuclear.

MISCELLANEOUS: EUKARYOTIC TOPOISOMERASE I AND II CAN RELAX BOTH

MISCELLANEOUS: EUKARYOTIC TOPOISOMERASE I AND STRANDS.

RELAX ONLY NEGATIVE SUPERCOLLS.

RELAX ONLY NEGATIVE SUPERCOLLS.

C -1 SIMILARITY: Belongs to the type II topoisomerase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. -!- FUNCTION: THE FUNCTION OF BRAIN MAPS IS ESSENTIALLY UNKNOWN.

PHOSPHORYLATED MAPIB MAY PLAY A ROLE IN THE CYTOSKELETAL CHANGES

THAT ACCOMPANY NEURITE EXTENSION. POSSIBLY MAPIB BINDS TO AT LEAST

TWO TUBULIN SUBUNITS IN THE POLYMER, AND THIS BRIDGING OF SUBUNITS

MIGHT BE INVOLVED IN NUCLEATING MICROTUBULE POLYMERIZATION AND IN

STABILIZING MICROTUBULES.

-!- SUBUNIT: 3 DIFPERENT LIGHT CHAINS, LC1, LC2 AND LC3, CAN ASSOCIATE

WITH MAPLA AND MAPIB PROTEINS.

-!- DOWAIN: Has a highly basic region with many copies of the sequence

KKEE and KKEIV, repeated but not at fixed intervals, which is

responsible for the binding of MAPIB to microtubules.

-!- PTW: LC1 is coexpressed with MAPIB. It is a polypeptide generated

from MAPIB by proteolytic processing. It is free to associate with

both MAPIB (By similarity).

-!- SIMILARITY: TO MAPIR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright, It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. -!- FUNCTION: THE FUNCTION OF BRAIN MAPS IS ESSENTIALLY UNKNOWN.

--- PHOSPHORYLATED MAPLB MAY PLAY ROLE IN THE CYTOSKELETAL CHANGES
THAT ACCOMPANY NEURITE EXTENSION. POSSIBLY MAPIB BINDS TO AT LEAST
TWO TUBULIN SUBUNITS IN THE POLYMER, AND THIS BRIDGING OF SUBUNITS
MIGHT BE INVOLVED IN NUCLEATING MICROTUBULE POLYMERIZATION AND IN
STABILIZING MICROTUBULES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WITH MAPIA AND MAPIB PROTEINS.

WITH MAPIA AND MAPIB PROTEINS.

DOMAIN: Has a highly basic region with many copies of the sequence KKEE and KKEI/V, repeated but not at fixed intervals, which is responsible for the binding of MAPIB to microtubules.

PRIN: LCI IS COEXPRESSED WITH MAPIB: IT IS A POINTEPTIDE GENERATED PROM MAPIB BY PROTEOLYTE PROCESSING. IT IS FREE TO ASSOCIATE WITH BOTH MAPIB AND MAPIB. IT INTERACTS WITH THE AMINO-TERMINAL REGION
                                                                                                                                                                                                                                                                                                                              2 X 8 AA TANDEM REPEATS OF A-K-V-E-K-E-E-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- FUNCTION: One of the essential components for the initiation of protein synthesis. Protects formylmethionyl-tRNA from spontaneous hydrolysis and promotes its binding to the 30S ribosomal subunits. Also involved in the hydrolysis of GTP during the formation of the 70S ribosomal complex (By similarity).
-!- SUBCELULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO THE IF-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
